DOCUMENT-IDENTIFIER: JP 10187318 A

TITLE: AUTOMATIC SETTING PROCESSING SYSTEM FOR CUSTOMER ATTRIBUTE INFORMATION

PUBN-DATE: July 14, 1998

INVENTOR- INFORMATION:

NAME

IMAI, TAKAATSU

ASSIGNEE- INFORMATION:

NAME COUNTRY

NEC CORP N/A

APPL-NO: JP08357285

APPL-DATE: December 26, 1996

INT-CL (IPC): G06F 3/02; G06F 3/14; G06F 19/00

ABSTRACT:

PROBLEM TO BE SOLVED: To provide the automatic setting processing system of customer attribute information for improving operability and working efficiency, saving a window work, and improving the safety and reliability of registered information by automatically setting the attribute information of a customer to which a window input is not necessary at a system side according to the content of designated person at the time of registering new customer information from a window.

SOLUTION: This system is provided with an inputting part 10 which inputs customer data, constant information managing part 30 which manages customer attribute correlation information, processing part 20 which operates the automatic setting processing of the customer attribute information, and customer data base 40 which stores customer data. Then, the customer attribute correlation information is obtained from the constant information managing part 30 by using the person of the customer data inputted from the inputting part, the automatic setting of the automatically settable customer attribute information is operated, and the customer data are stored in the customer data base 40.

NEC SOFTWARE KANSAI LTD N/A

APPL-NO: JP04053136

APPL-DATE: March 12, 1992

INT-CL (IPC): G06F 15/21

ABSTRACT:

PURPOSE: To utilize new information with priority by adding each of information read out from a customer master to the family information of information read out from a new registering customer file without overlapping it.

CONSTITUTION: Customer information. read out from a new customer file F1 storing new registering customer information is stored in a work area of a processing part P1. Applicant information and the family information of the same household as the applicant are stored. Then registered customer information read out from a customer master F2 is stored in the work area. All of the customer information of a work area W1 are transferred to a work area W3. Each of customer information stored in a work area W2 is collated with all of the customer information stored in the work area W3 to check identity. Only when the customer information is not identical with the contents of the work area W3, the customer information is added as the family information of the work area W3. Then the customer information stored in the work area W3 is written in the master F2. Consequently the registered information is stored following the new information.
